

Gudmund Høst, Director

Nordic e-Infrastructure
Collaboration

1. Skills of e-Infrastructure providers

To deliver high quality services effectively and efficiently

- Career paths
- Reward mechanisms
- Scaling issues
 - Crowdsourcing user support?
 - Outsourcing low-level services and operations?

2. Skills of e-Infrastructure users

- Co-design and co-organize courses with end users
- Teaming up with educators
- What about underrepresented groups?
- How does it scale?
 - MOOCs?

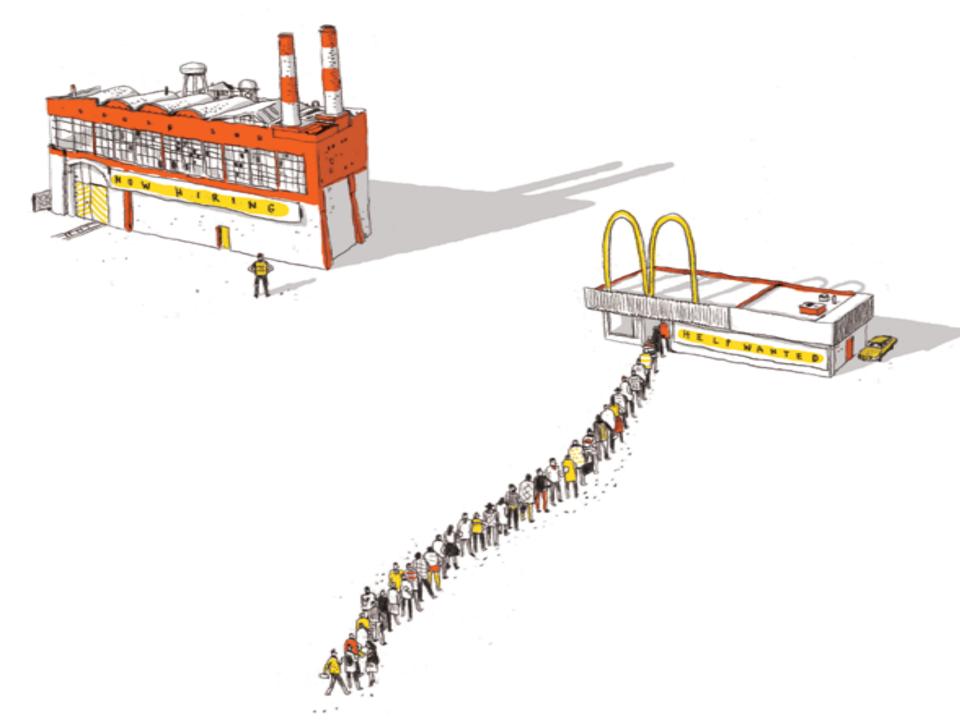

3. Skills of *future* e-Infrastructure users

- Computational thinking and data science
 - «Computation is the new math»
- Integrate into curricula
- Vertical integration, from primary level
- Horisontal integration, across disciplines and dept's
 - Ex. Computing in Science Education, Oslo U.

Main actors are university and education sector

The fake skills shortage

- What salary are you offering? (A.Davidson, 2012)
- Data scientist the sexiest job of the 21st century?
- What forces drive the e-Infrastructure job market?

Take-home questions

- 1. Why in-house?
- 2. What salary are you offering?
- 3. How does it scale?
